

## Custom Distance Matrix

The Custom Distance Matrix is a powerful feature in Tramm designed to allow setup of distances not related to the planning function.

# Enhancing Financial Accuracy

The custom distance matrix gives users the ability to define and store distances that go beyond those used strictly for trip planning. This flexibility is especially valuable for financial processes, such as billing or cost allocation, where precise, standardized values are required. By referencing the matrix, organizations can ensure that charges are calculated consistently across trips, eliminating the need for manual entry and reducing the risk of errors.

The matrix supports both quick additions for individual records and bulk editing through Excel, making it scalable for large datasets. Once configured, the system automatically applies the correct distance to each trip via the fixedDistance custom field, which then feeds directly into financial calculations.

# How to Configure Your Matrix

01

Enable the distance-time extension.

Ensure that the distance-time extension is installed via Extension Manager.

| Extensions (2)                                                     |                     |                                        |  |
|--------------------------------------------------------------------|---------------------|----------------------------------------|--|
| <div><div><div></div><div></div><div></div><div></div></div></div> |                     |                                        |  |
| ID ↑                                                               | Name                | Description                            |  |
| fixed-distance-time                                                | Fixed Distance/Time | Manage fixed site distance/time matrix |  |

02

Grant access to the distance-time app.

Make sure the distance-time app is properly configured and appears in the Apps section of Settings

03

Add fixedDistance custom field

Ensure that the fixedDistance custom field is setup under the Trip entity.

Custom field definitions

Extend this entity with custom fields

| Name          | Span       | Type   | Details | Options | Actions |
|---------------|------------|--------|---------|---------|---------|
| email         | Collection | Text   |         |         |         |
| fixedDistance | Single     | Number |         |         |         |

Total items: 2

04

Add entries to the distance matrix

Navigate to the distance time app and add distance entries either via the UI or excel download/upload.

| Valid | Actions     | Origin Site       | Destination Site  | Distance |
|-------|-------------|-------------------|-------------------|----------|
| Valid | <div></div> | Site<br>Cpt_Depot | Site<br>Jhb_Depot | 1600     |

# Using Distances in Financials

To use these distances for financials the correct charge needs to be setup.

## Configure the Charge Type

Create a new charge and select ctByExtValue as the charge type.

| Definition   |
|--------------|
| Type*        |
| ctByExtValue |

## Reference the Custom Field

In the charge configuration, reference the fixedDistance custom field.

| Options       |
|---------------|
| Reference     |
| fixedDistance |

## Financial Calculations

The financial module uses the fixedDistance value to generate charges.

|                       |                                          |
|-----------------------|------------------------------------------|
| Transporter Payment   |                                          |
| jaCpoxjw Transporter2 |                                          |
| FinancialDistance     |                                          |
| TransporterDemo       |                                          |
| ZAR 4,000.00          |                                          |
| Calculated            |                                          |
| FinancialDistance     | ZAR 4,000.00                             |
| ctByExtValue          | Unit Amount: 4.0000 Quantity: 1,000.0000 |

# What Happens When Rules Are Broken

# Key Benefits

## 1 Accuracy

Distances are pulled directly from the matrix, reducing manual entry and minimizing errors.

---

## 3 Transparency

Financials are linked directly to operational data, making billing clear and easy to audit.

---

## 2 Efficiency

The matrix integrates automatically with trip creation, saving time and streamlining workflows

---

## 4 Scalability

Supports both quick updates and bulk edits, handling small or large datasets with ease.

---
