

Dynamic Trailers and Physical Dimensions

We've introduced two powerful enhancements to manual planning: dynamic trailers and physical dimensions.

Dynamic trailers and Physical Dimensions

With dynamic trailers, planners can now add or remove trailers while creating a trip, giving them far more flexibility than before. Vehicles that are capable of hitching trailers can be allocated, and the system automatically calculates how efficiently the vehicle–trailer combination is being used.

Physical dimensions allow you to define the actual measurements of vehicles and trailers—height, length, width, and mass—so that every trip reflects the real-world properties of your fleet

Vehicle Dimension Limits

Length	Width	Height	Mass
14 cm	2 cm	2 cm	42000 kg

☒ Include Load Mass

Dynamic Trailers

01

Create or Edit a Trip

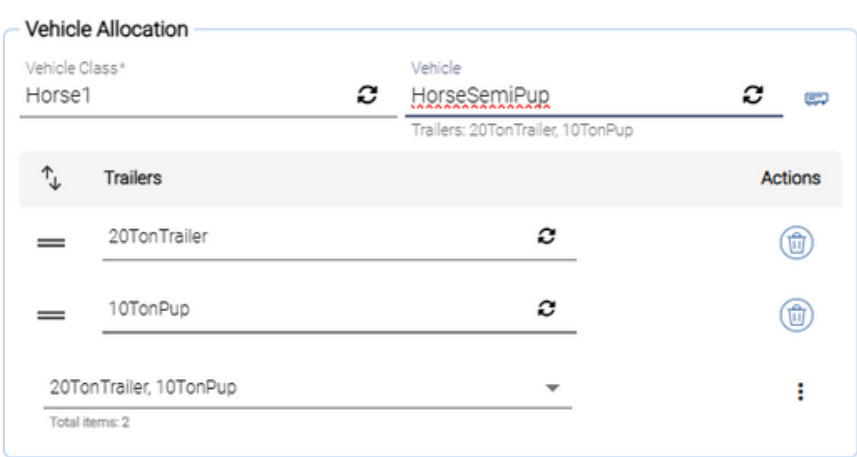

Edit or create a new trip.

02

Allocate Trailers

Under the allocation, allocate trailers to the trip.

04

Utilization and cost calculations

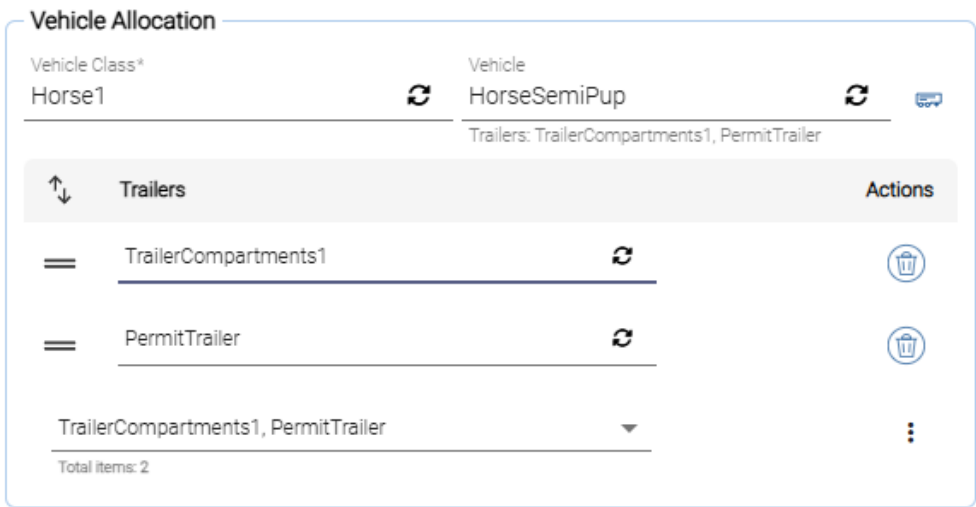

System will update the utilization and cost calculations on allocation.

DETAILS
Start Time: 2026-05-03 00:00 (+2)
Start Site: Dbn_Depot
Allocation: HorseSemiPup
Max Vehicle Utilization: 50.000%
Planned Duration: 8 h
Planned Distance: 1,500.00 km
Total Planned Quantity: 10
Calculated Planned Size: mass: 4,006.78
width: 1 m
height: 0.5
length: 1.2 m
volume: 60
ldm: 50 ldm
weight: 4,000 weight
groundPallets: 0 groundPallets
units: 10
vol_w: 0 vol_w
ldm_w: 0 ldm_w
cw: 4,006.78 cw
End Time: 2026-05-03 17:00 (+2)
Stops: 2

03

Reallocate trailers

Trailers can be reallocated at any time.

Physical Dimensions

01

Configure Settings

In planning configuration, configure the vehicle dimension limits.

Vehicle Dimension Limits

Length	Width	Height	Mass
14	2	2	42000

☒ Include Load Mass

Update

02

Configure Vehicle Classes and Trailers

Add physical dimensions to the vehicle classes and/or trailers.

Physical Size

Length	Width	Height	Mass
12	2	1,8	30000

03

Planning

Create a trip and allocate resources.

04

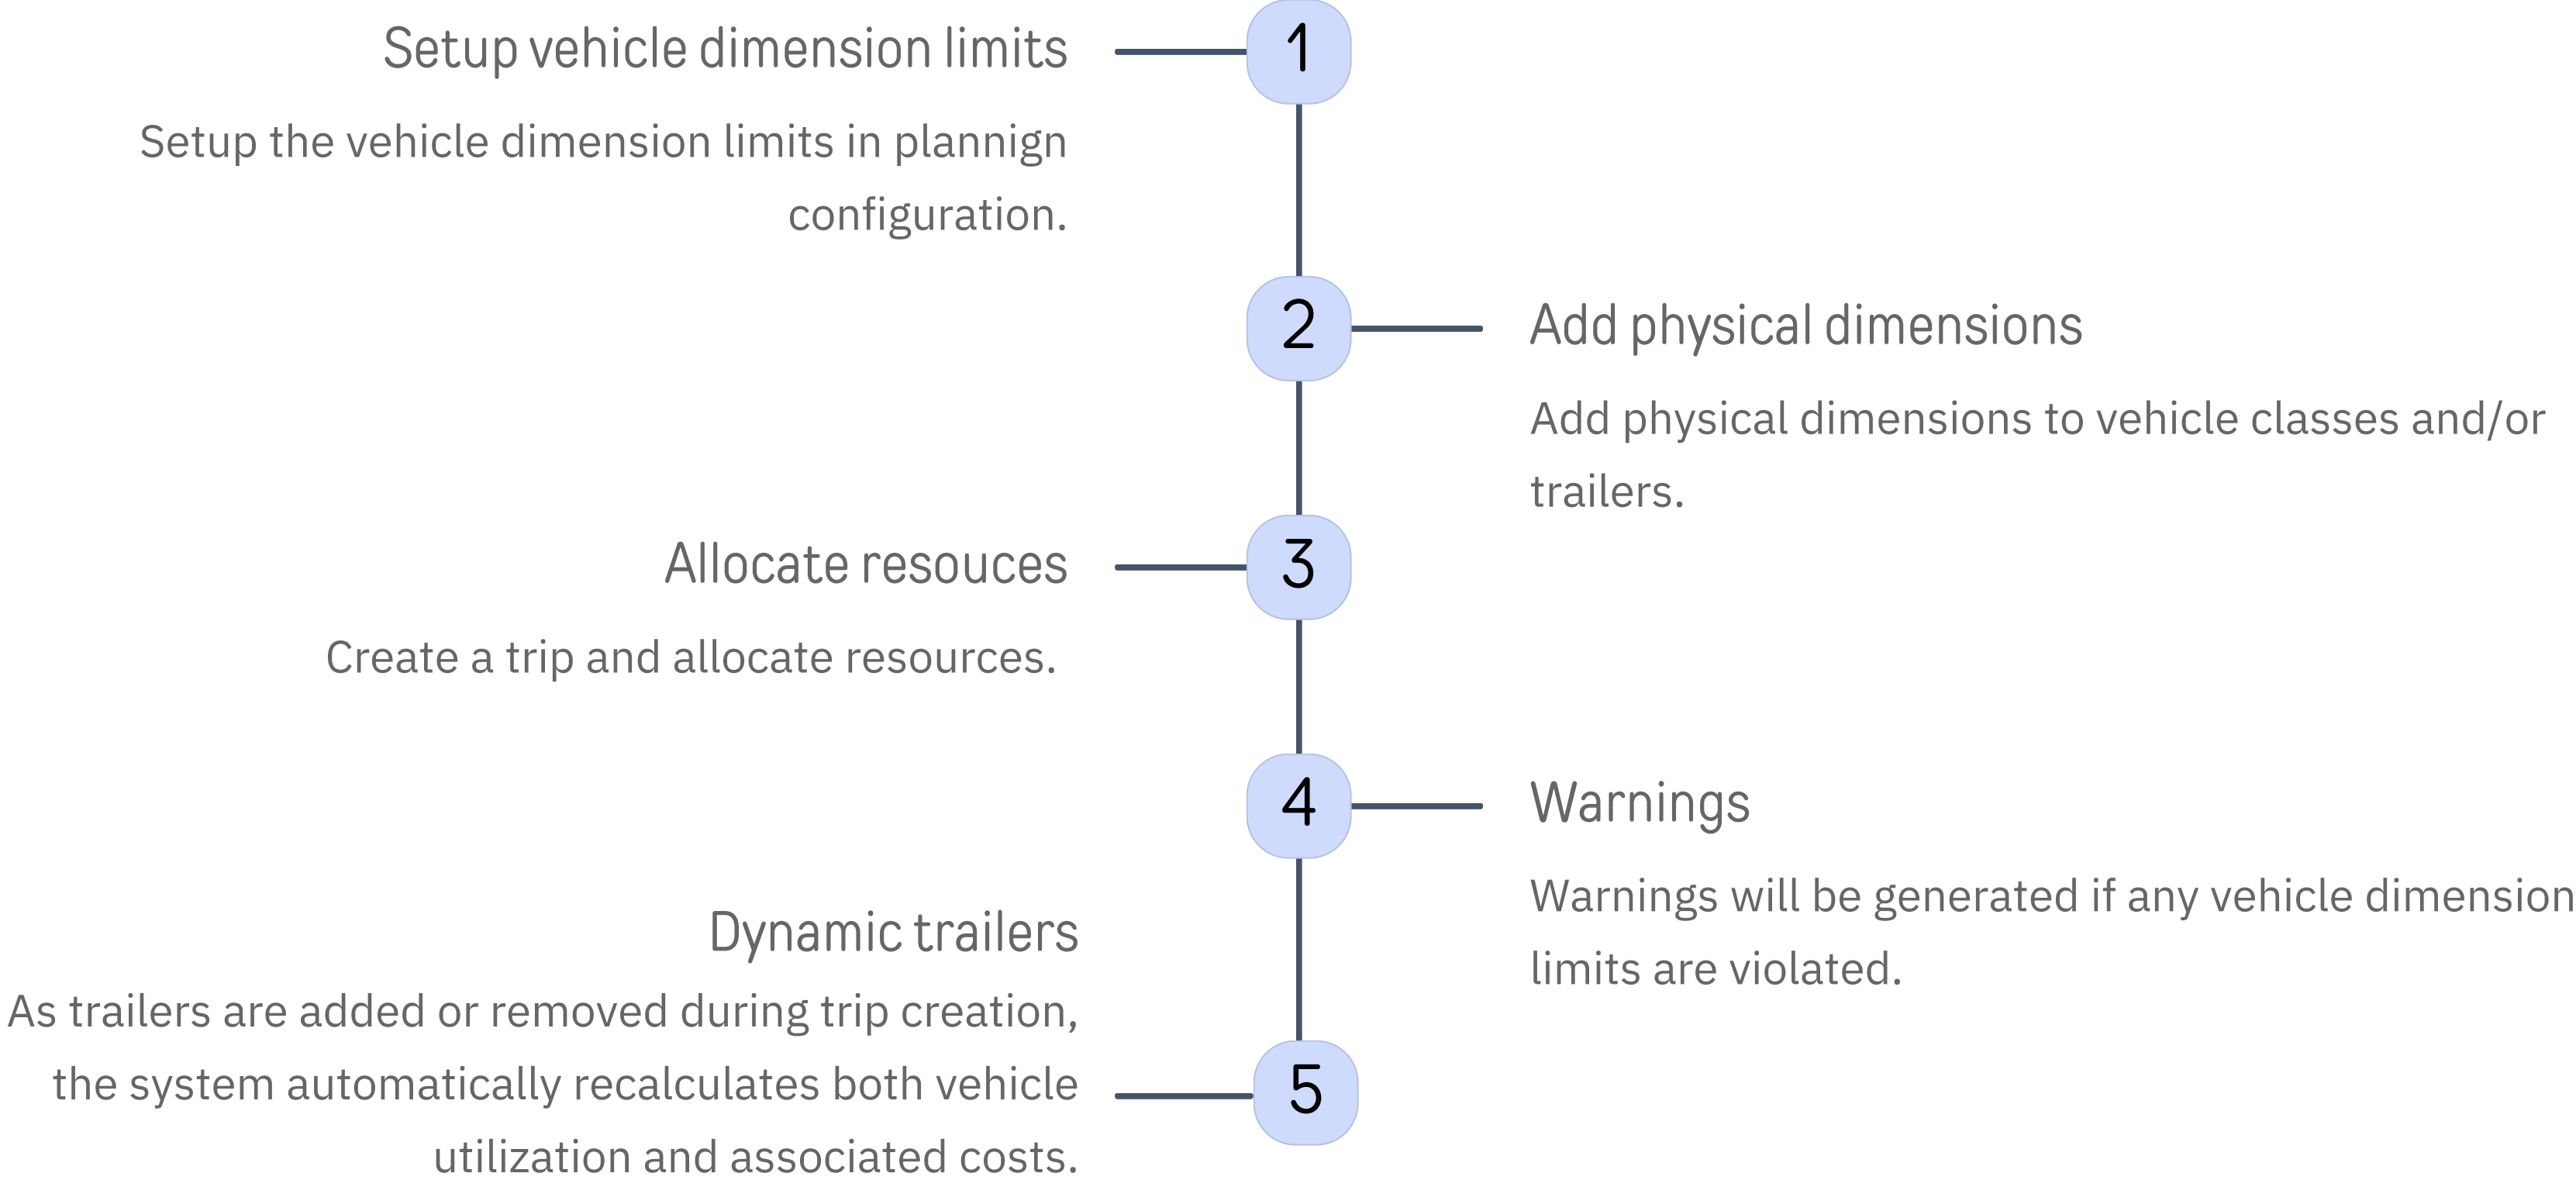

Warnings

Generates warnings if any vehicle dimension limits are violated.

VIOLATIONS

- Trailers dimensions(length) exceed vehicle limits.
- Trailers dimensions(mass) exceed vehicle limits.

Process flow

Key Benefits

1 Flexibility

Adjust trailer configurations on the fly during trip creation

3 Accuracy

Defined dimensions mean the system mirrors the true size and weight of your vehicles and trailers.

2 Efficiency

Automatic utilization calculations ensure vehicles are used to their full potential.

4 Compliance

Built-in checks help prevent violations of road regulations, reducing risk and ensuring safety.
