

Partial Redirects

The Partial Redirects feature enhances flexibility in managing delivery jobs within the trip builder. It allows users to redirect part of a job to another site, ensuring accurate stock distribution and streamlined operations.

Redirect partial jobs

The Partial Redirects feature empowers users to manage deliveries with precision and adaptability. By enabling partial job redirection, the system ensures accurate stock handling, efficient workflows, and improved operational control.

Workflow for Redirecting

01

Edit trip

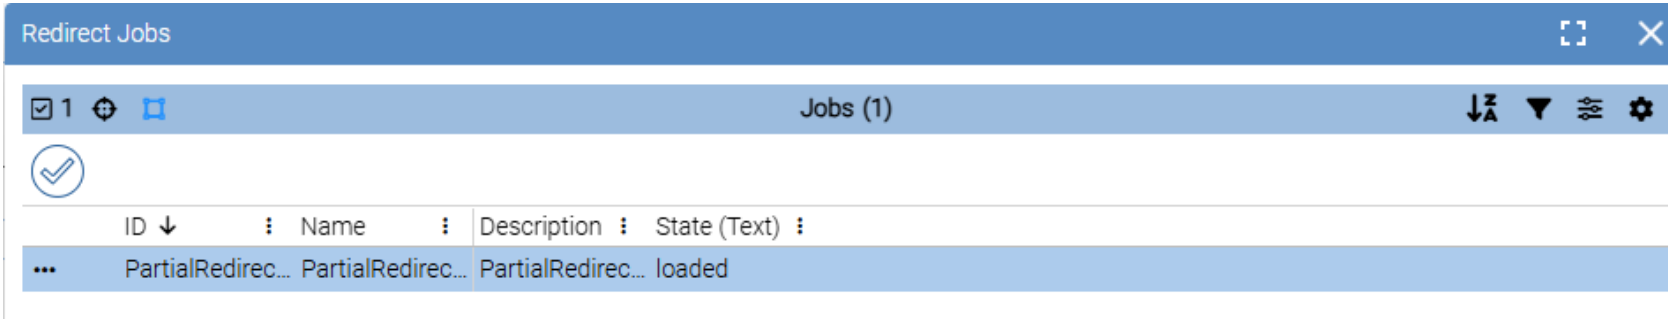

Open the trip you want to edit and select the delivery stop.
Choose the Redirect option.

02

Select job

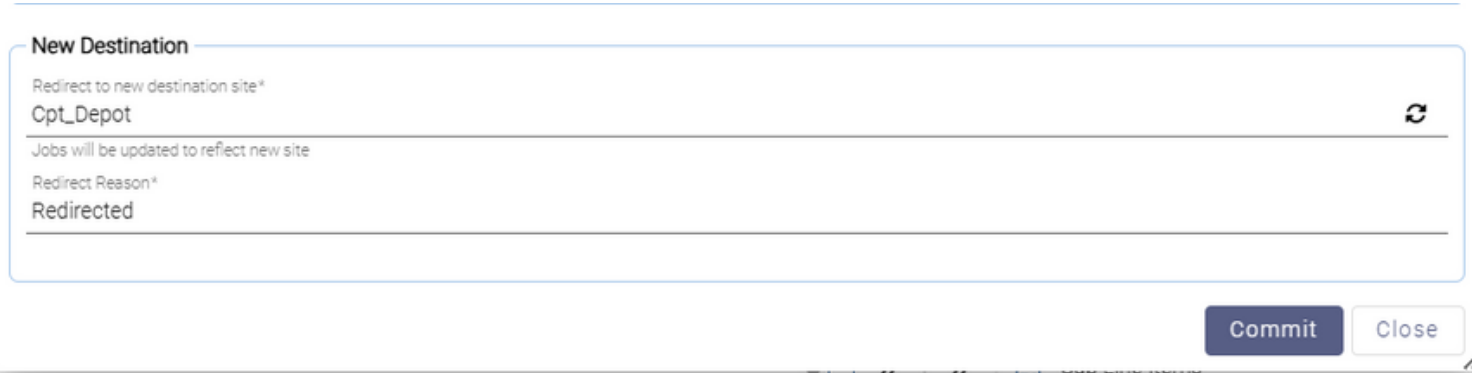

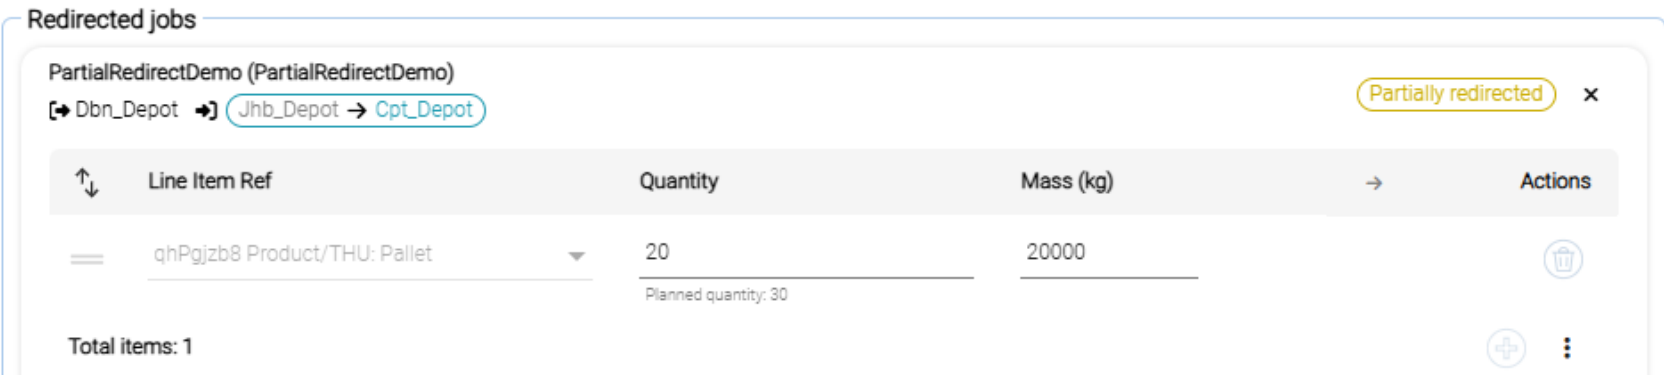

Select the job, then confirm by clicking the tick action button.

04

Set redirect site and reason

Choose the new destination site, enter the reason for the redirect, and then commit the changes.

Changes to the Order

After a job is partially redirected, the system applies the following updates to the order.

New job

A new job is generated with the specified line item values and automatically linked to the original order.

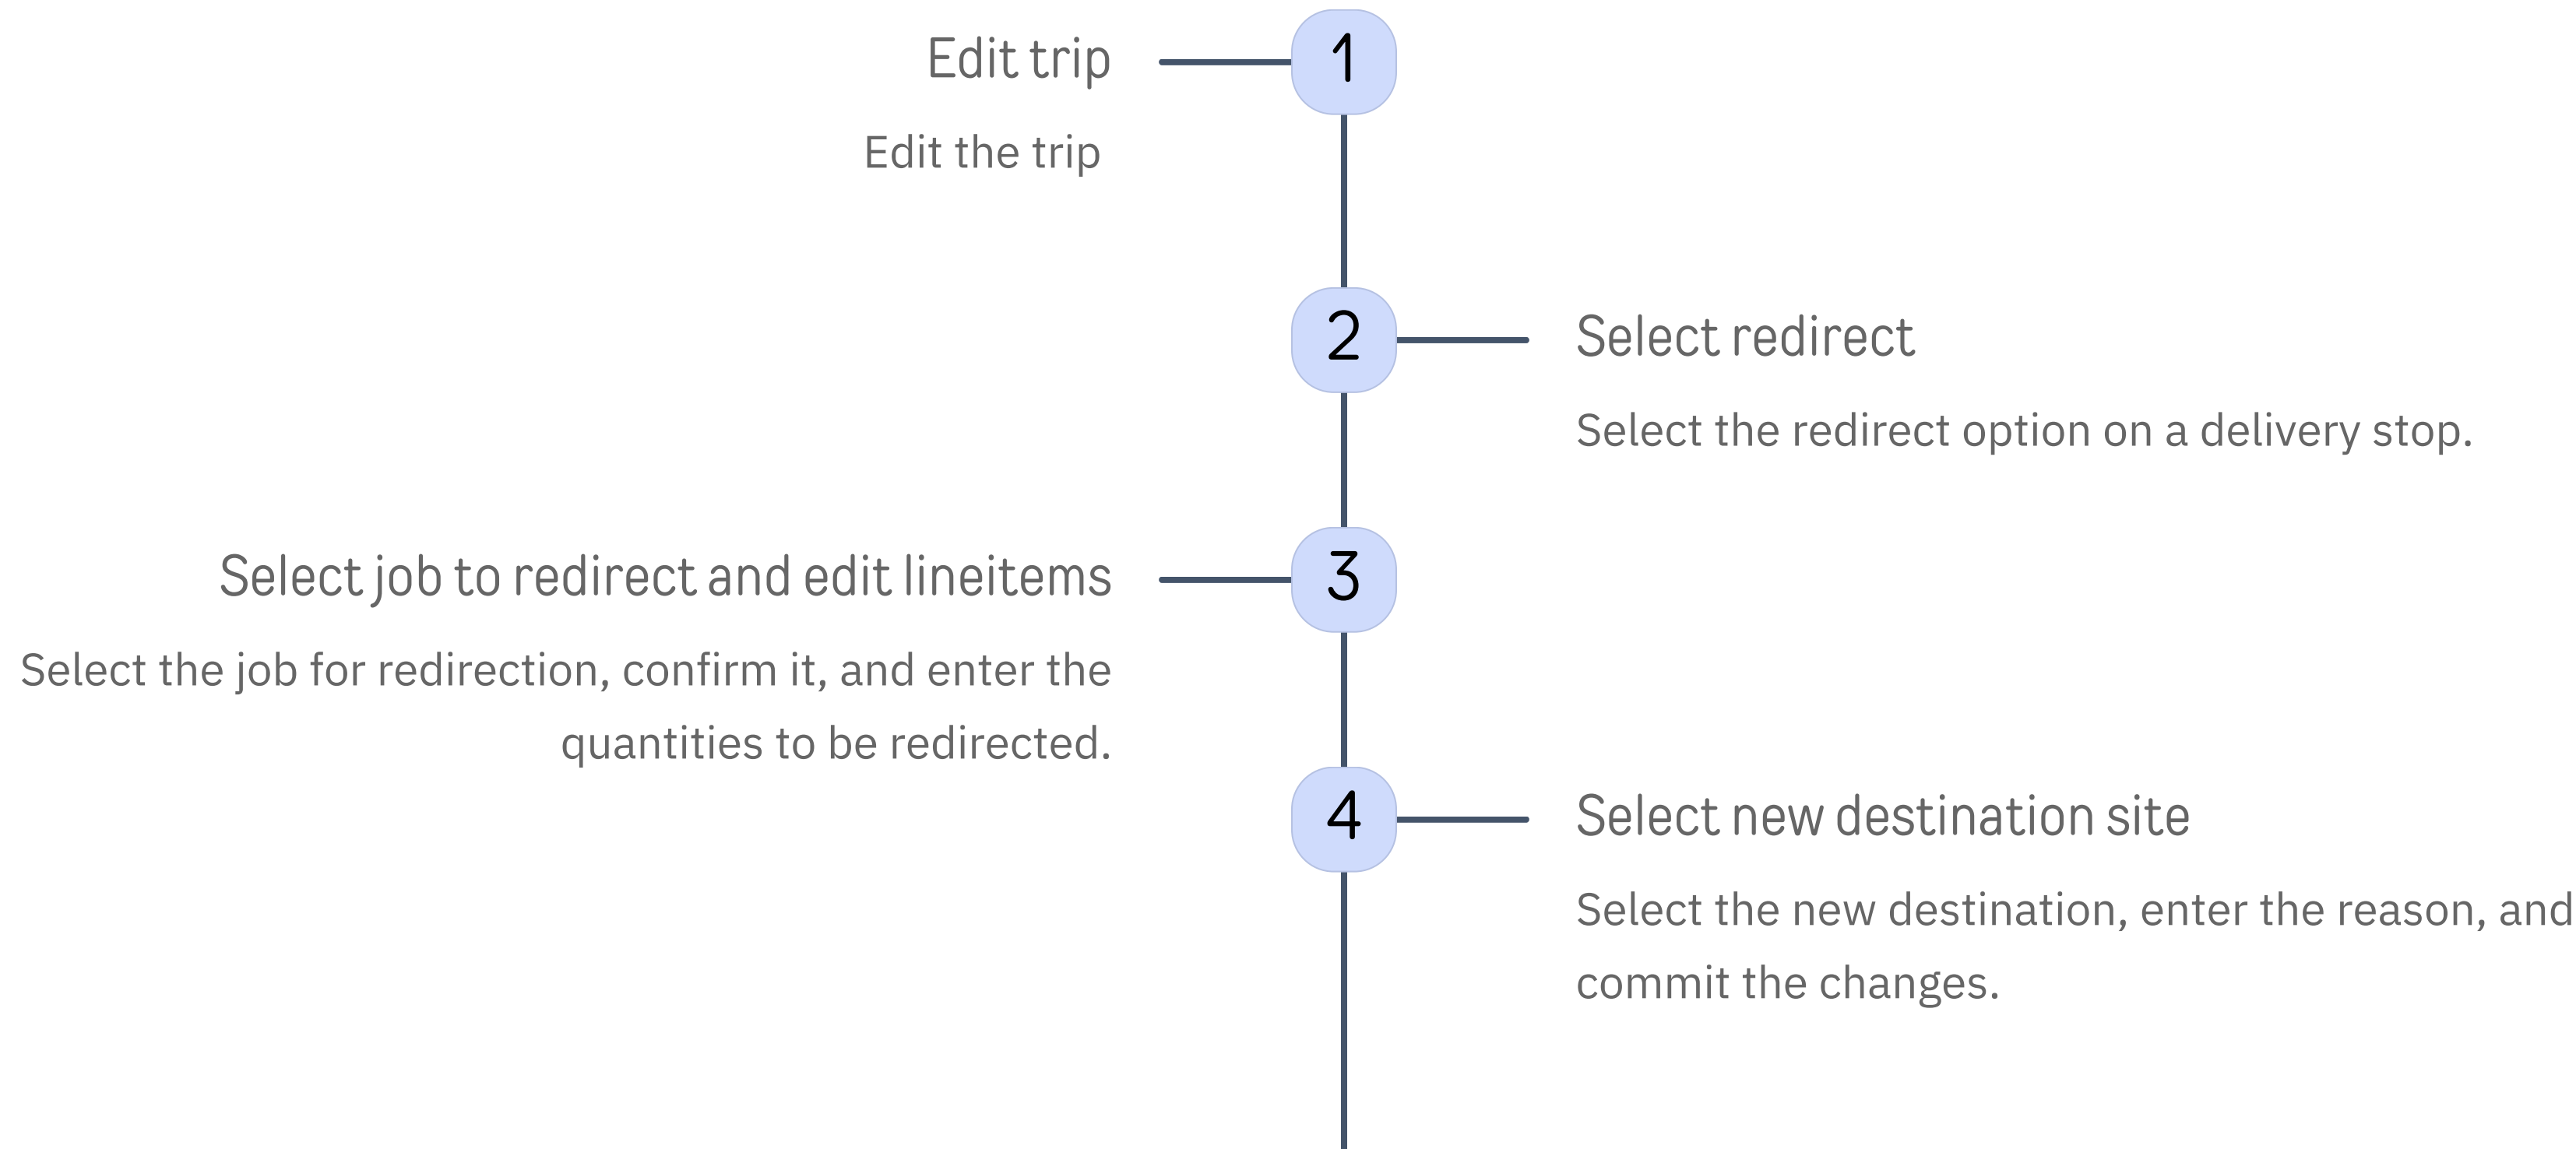

Original Job updates

The original job is updated to show the difference between the initial quantity and the redirected quantity.

Tag

Redirected jobs are marked with a tag for clear visibility and traceability.

Process

Key Benefits

1 Operational Flexibility

Redirect only the quantities you need, instead of entire jobs. Adapt quickly to changing site requirements or last-minute adjustments.

3 Efficiency Gains

Reduces manual corrections and paperwork. Automates creation of additional stops and jobs, saving time.

2 Improved Accuracy

Stock levels are updated automatically to reflect redirected amounts. Prevents over-delivery or under-delivery by keeping records precise.

4 Enhanced Visibility & Traceability

Redirected jobs are tagged for easy identification. Clear audit trail ensures accountability and transparency.
