

Quantity Conversion

Dimension Conversion allows required quantities to be calculated by converting backwards from a selected dimension

Accurate Quantities, Instantly.

Dimension Conversion allows you to calculate required quantities by converting backwards from a selected dimension—such as Specific Gravity (SG). This gives you an accurate and automated way to determine quantity when you already know a related measurement like volume.

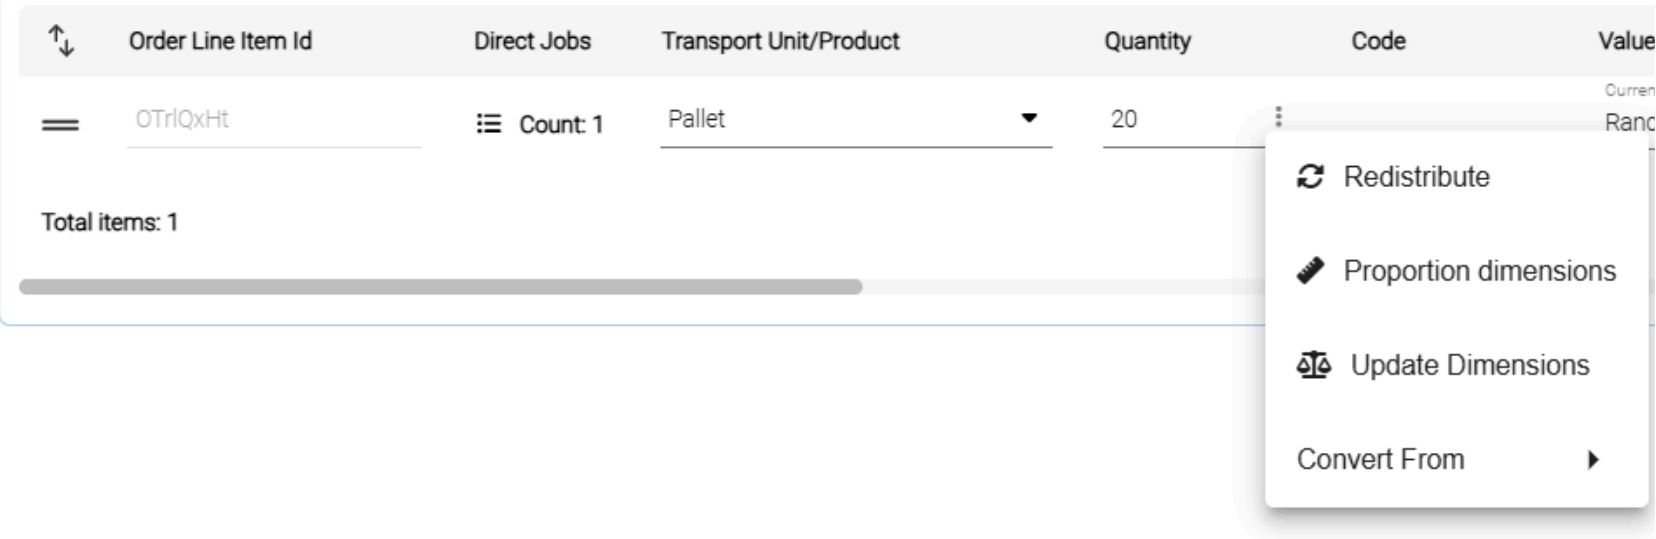

How it works

1

Order form

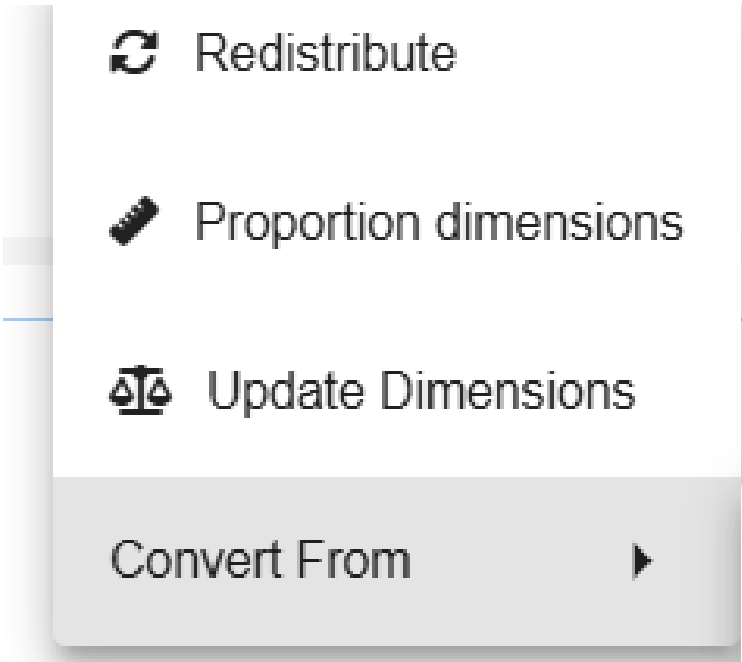

Navigate to lineitem section of order form.
Click the 3 dots next to the quantity field.

2

Convert from option

Select the convert from option

Setting up your configuration

- 3

Measurements and Conversions

Enter the Dimension to convert from. This is setup under Master Data in the Product's or TU's size. Then enter the Value from which you want to convert.

Convert From ▶

Dimension

SG (SG) ▼

Dimension value: 1.5

Value

8000 ▲▼

Result: 5333.333333333333

Convert

- 5

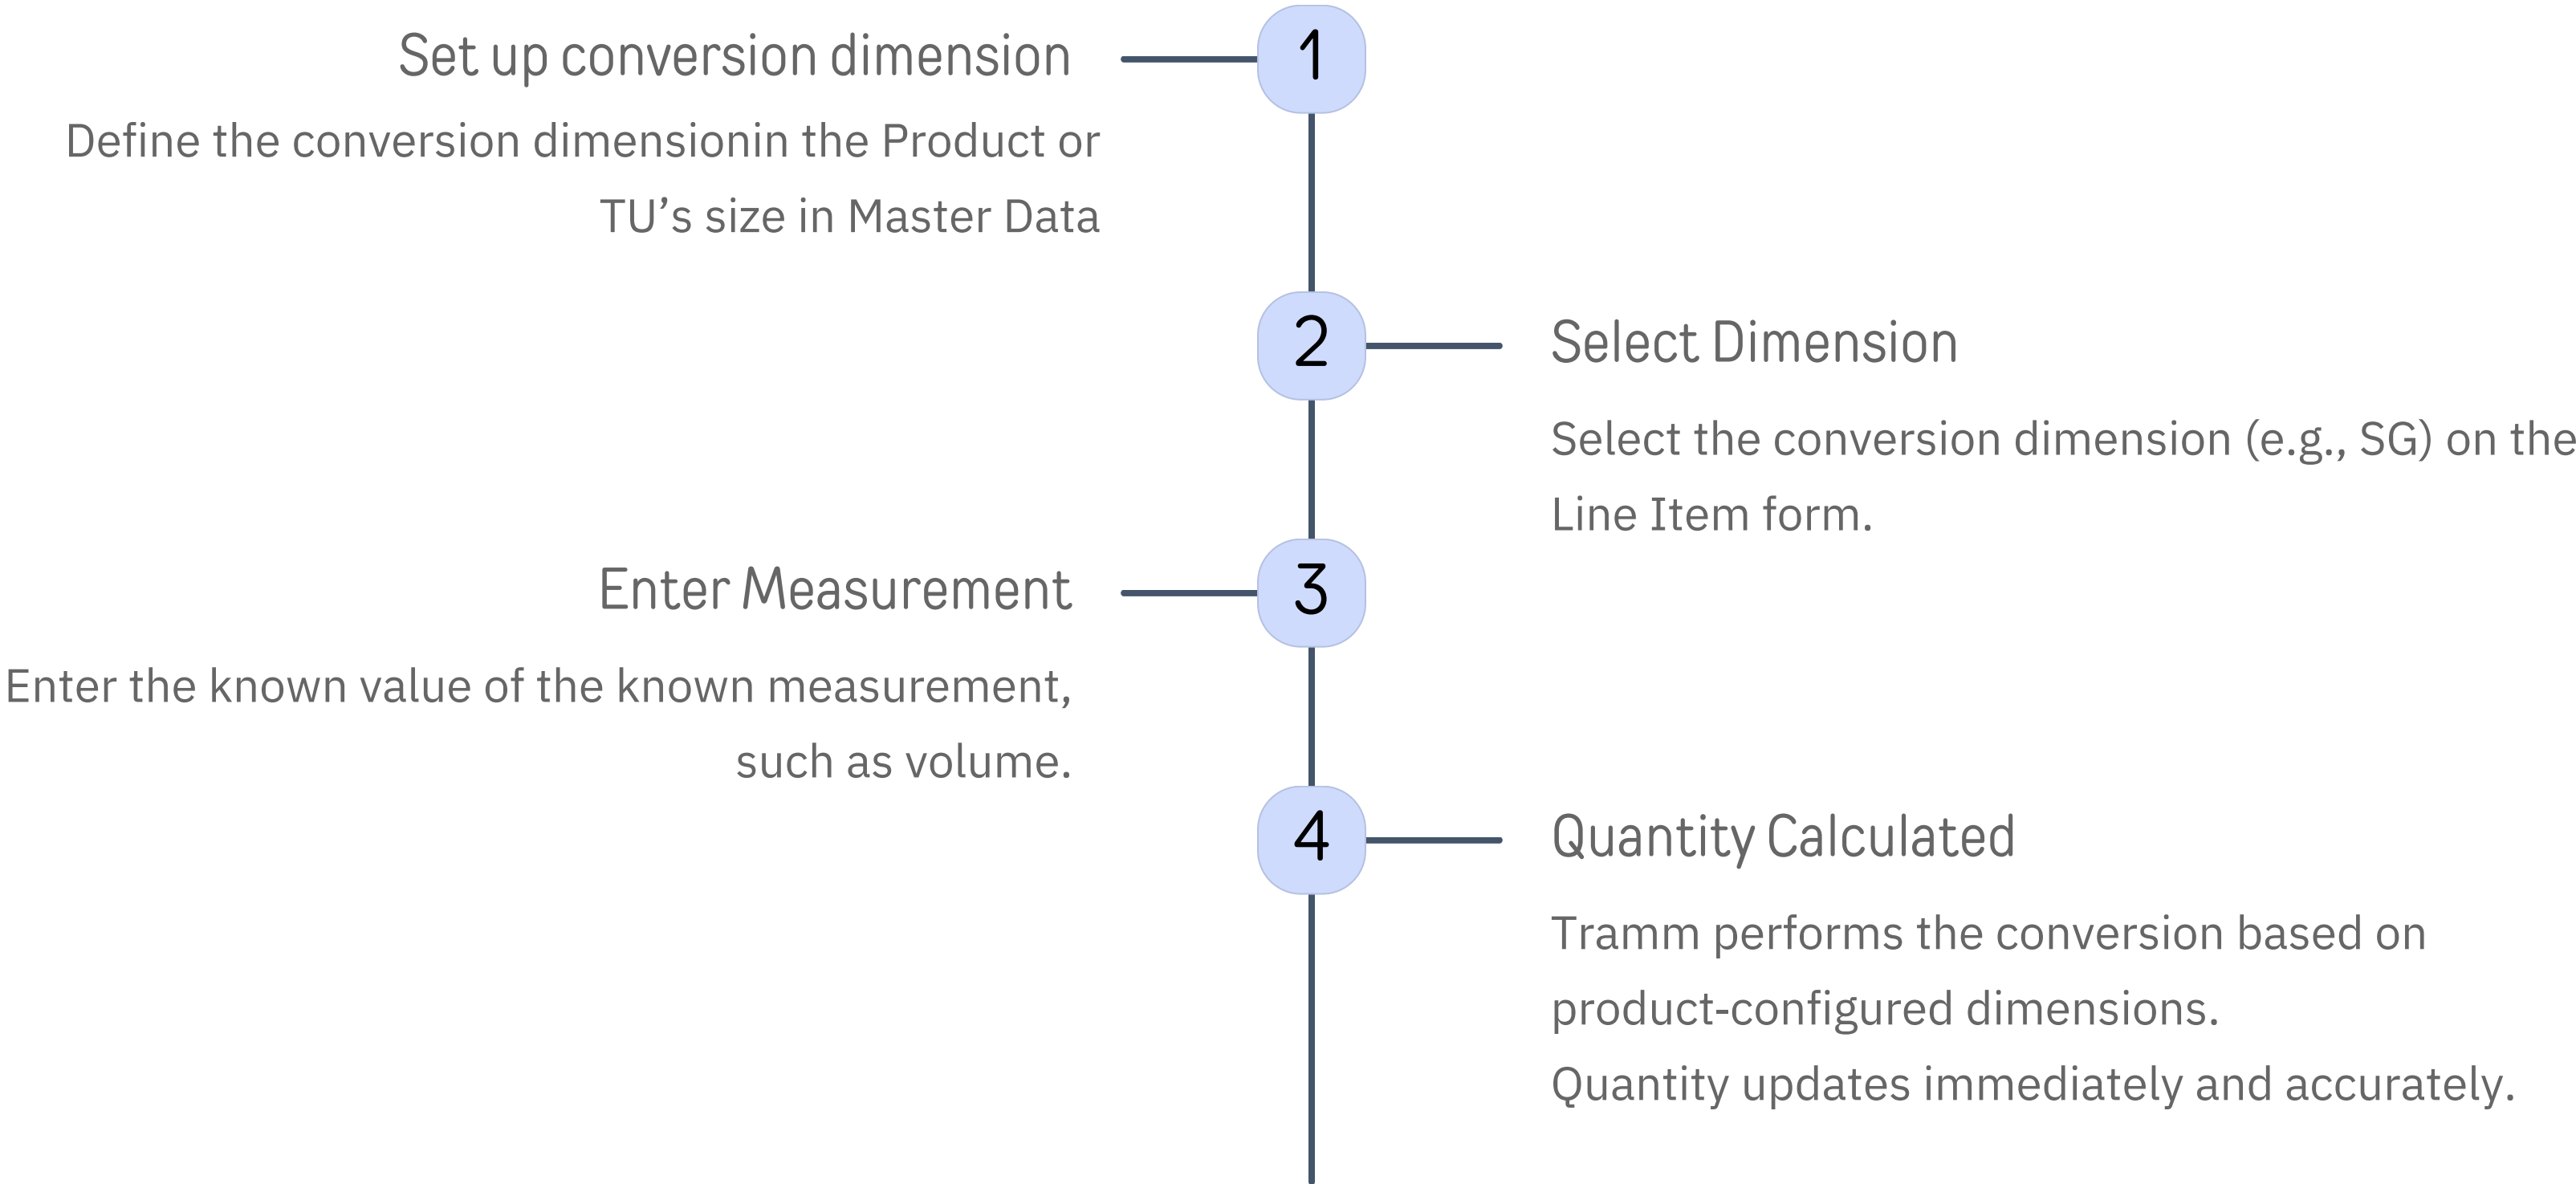

Quantity Calculated

The quantity is converted by calculating Value/Dimension

5333,333333333333 ⋮

Conversion Process

Key Benefits

1

Accurate Conversions

Keeps quantities aligned with real product properties for precise, reliable results.

3

Integrated & Seamless

Built directly into the Line Item form for quick, effortless use.

2

Time-Saving & Error-Reducing

Automates calculations to eliminate manual work and reduce mistakes.

4

Consistent & Real-World Aligned

Use product-configured dimensions to ensure conversions remain consistent and match real-world physical behaviour.
